

SEL POWERMAX VALIDATION USING RTDS

ASAD MOHAMMAD

SEL ES

ENGINEER - POWER SYSTEMS

USER SPOTLIGHT SERIES BY  **RTDS**
Technologies

CONTENTS

- The System
- The Problem
- The Simulation model
- The HIL setup
- SEL solutions
 - Generation Control (Active and reactive)
 - Load Shedding

THE SYSTEM

- Islanded and Isolated
- Strict EPA regulations
- Expensive down time
- Similar rated generators
- Industrial load
- No renewable energy

THE SIMULATION MODEL

- Accurate model of generators and loads, with some approximations.
- IEEE model of generator.
- Two generators controlled by Hardware. Six generators of power system simulated in RTDS.

WHAT WE DO

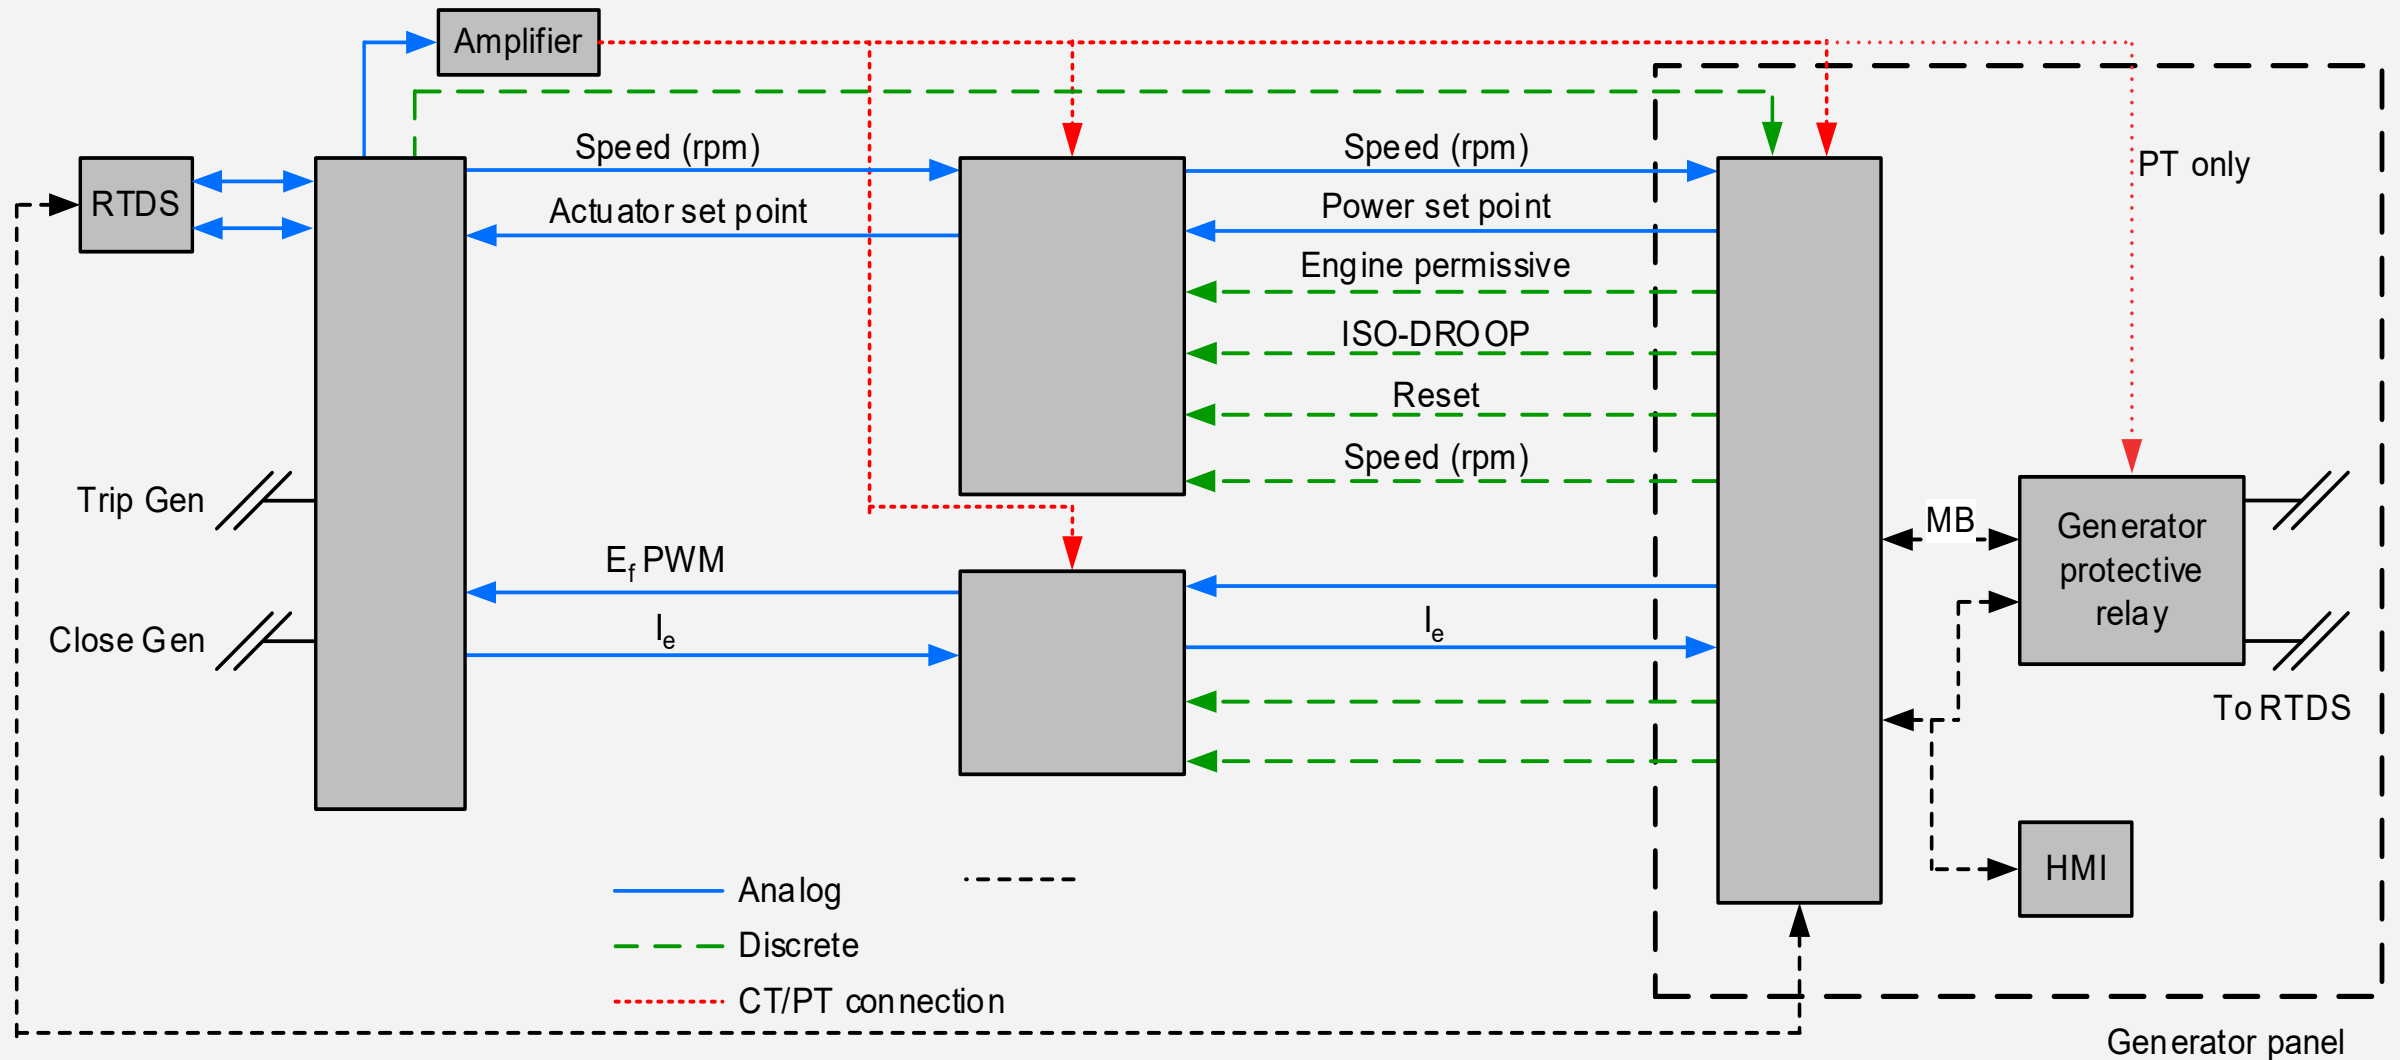

Special Protection Systems (SPS) Group

- System Stability studies
 - Voltage stability
 - Frequency stability
- Generation control
- Load shedding solutions
- SCADA
- Island based or Grid based operations
- Remedial Action Schemes (RAS)

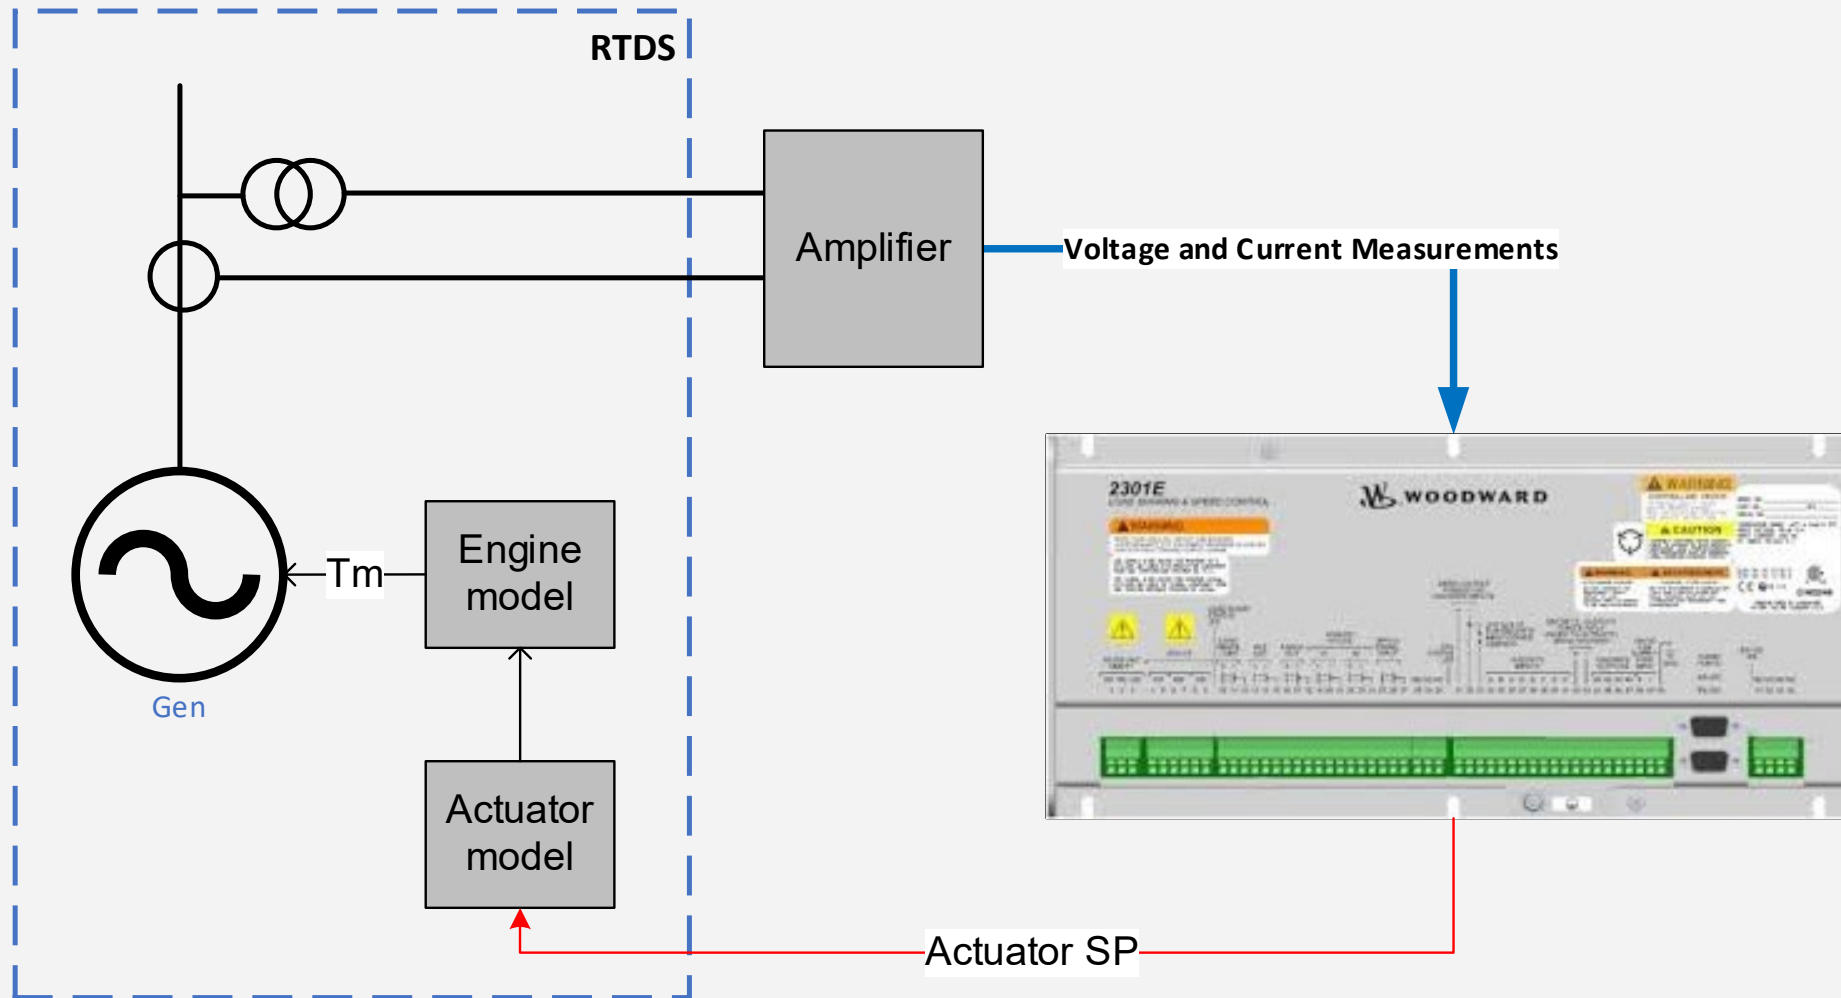

GOALS FOR THIS SYSTEM

- Generation control.
- Tuning Governor and Exciter.
- Protection for generators and feeders.
- Reactive Power control through VFDs.
- Load shedding
 - Contingency based load shedding
 - Under Frequency based load shedding
 - Rolling average algorithm (PLSP)

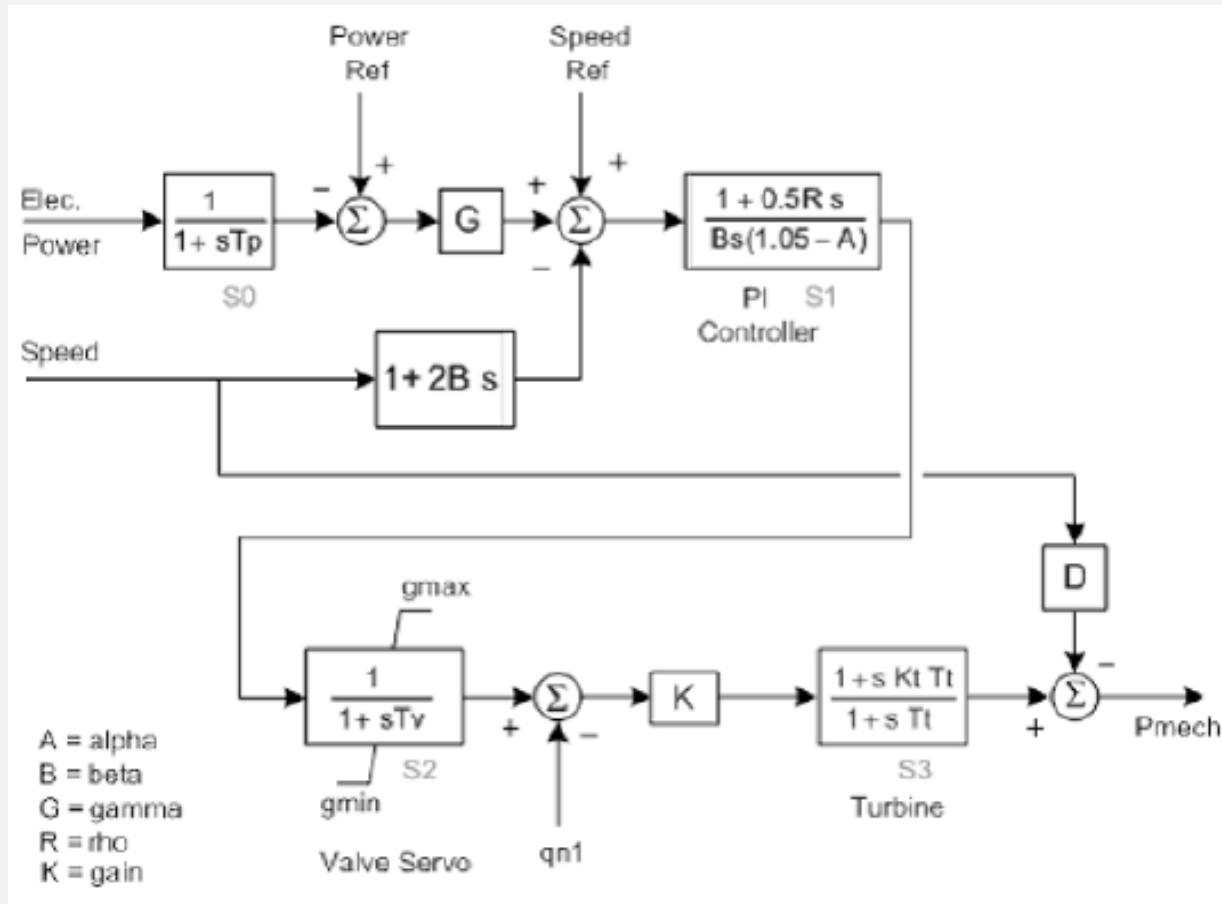

OVERALL SETUP

GOVERNOR DESIGN

POWERMAX DESIGN

GENERATION CONTROL USING SEL-751 & SEL-700G

- Loading and Unloading generator.
- Power setpoints.
- Generator mode control (ISO/Droop; Volt/PF)
- Generator breaker trip and synchronize.
- Pushbutton interface for generation control and remote control through centralized POWERMAX™ solution.

HARDWARE VS SOFTWARE

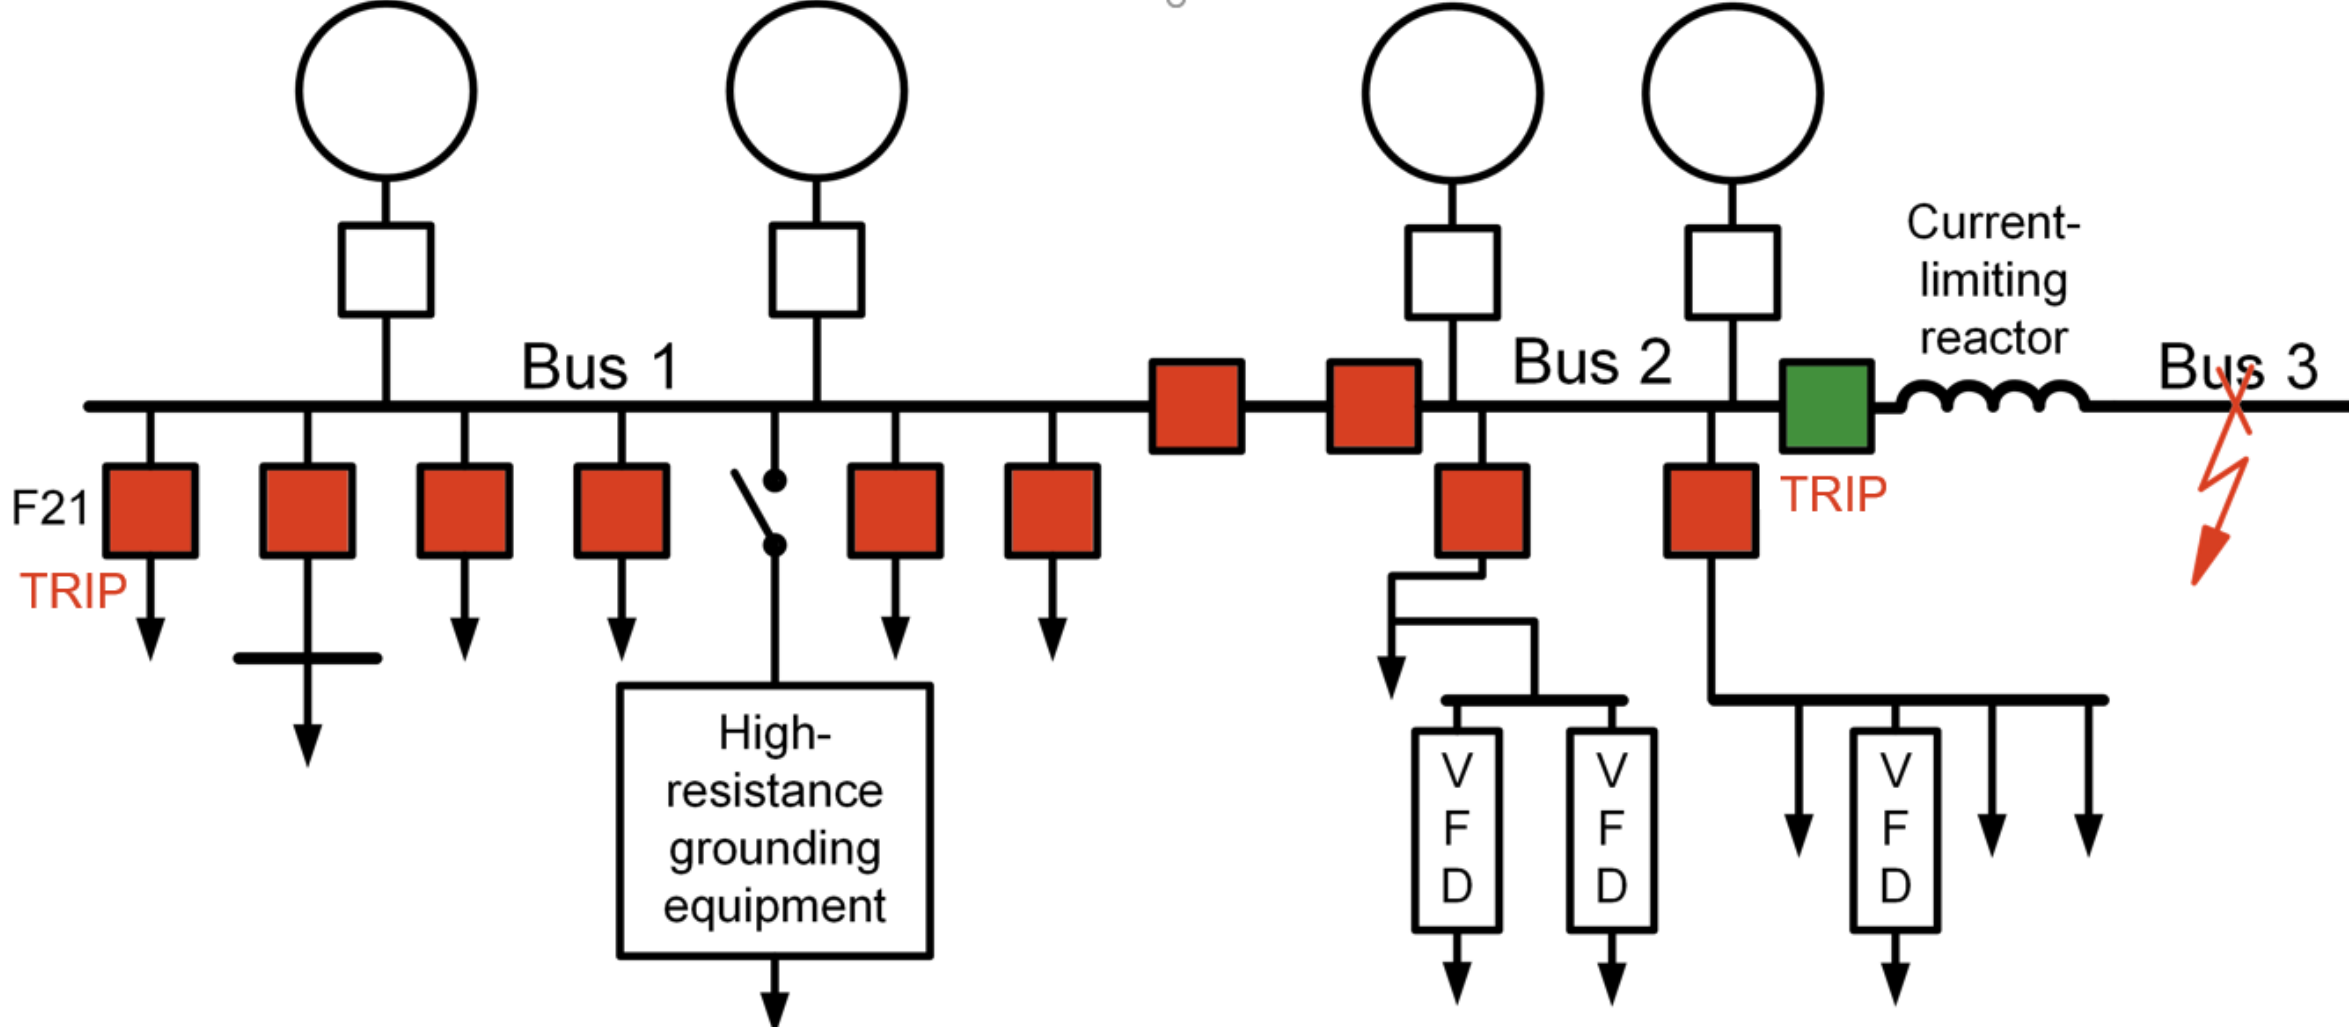

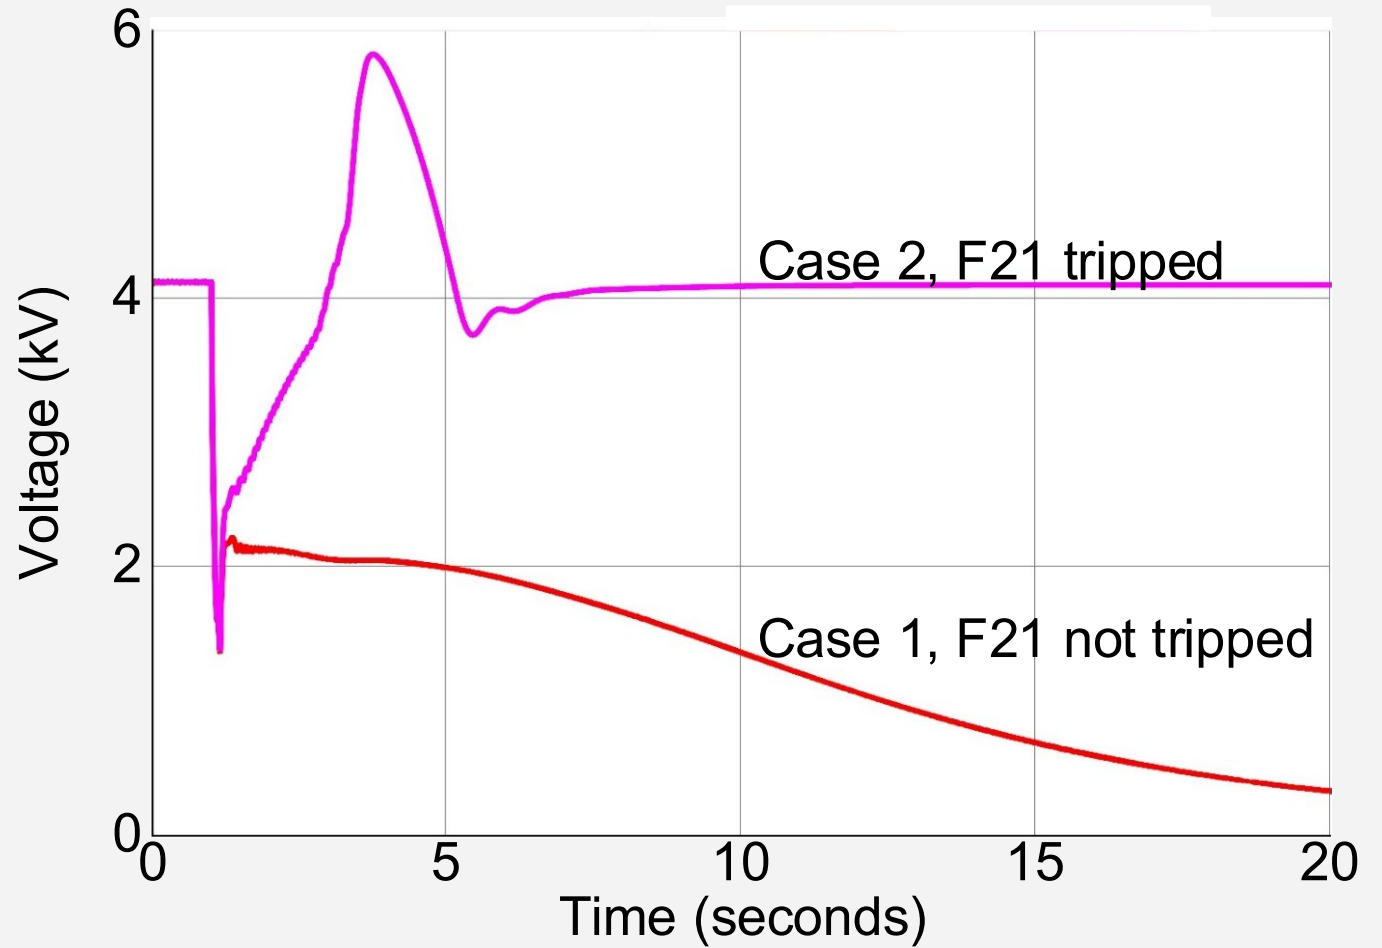

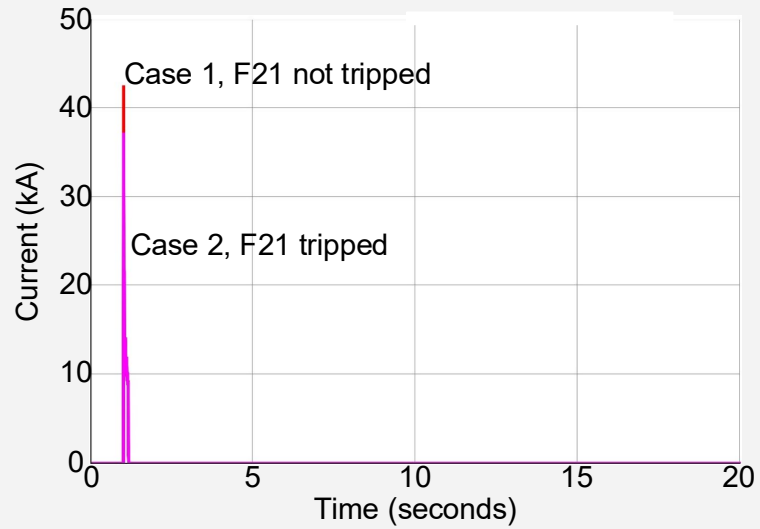

SIMULATION VS SITE

Governor	Simulation estimate	Site setting
P	3.15	3.15
I	0.75	0.75
D	0.15	0.15

AVR	Simulation estimate	Site setting
Vp	22.7	22.7
Ta	1.38s	1.38s
Tb	0.15s	0.15s

SOME INTERESTING EVENTS

WHAT WE ACHIEVED THROUGH HIL TESTING

- Validation of Power system.
- Validation of generator controls through SEL 751.
- Validation of PowerMAX algorithms.
- Protection validation.
- Corner cases and special logic for system stability.
- Pre tuning generator governor and exciter.
