

Enhancing Inverter Performance through C-HIL Testing and Ensuring Grid Compliance

Jigar Gorasiya

Enerzinx LLC

APPLICATIONS & TECHNOLOGY CONFERENCE 2025
CHICAGO, ILLINOIS, U.S.A.

OUTLINES

01 | Who are we?

02 | New Kid on the Block

03 | HIL Test Setup and the process

04 | Comparison of PSCAD/RMS/HIL simulations

05 | Recommendation

06 | Key Takeaways

Enerzinx Global Footprint

Office Locations

Multi LVRT - After

Performance improvement - HVRT

PSCAD Model Comparison with HIL

**PSCAD Model
Exact Firmware
-DLL based
model**

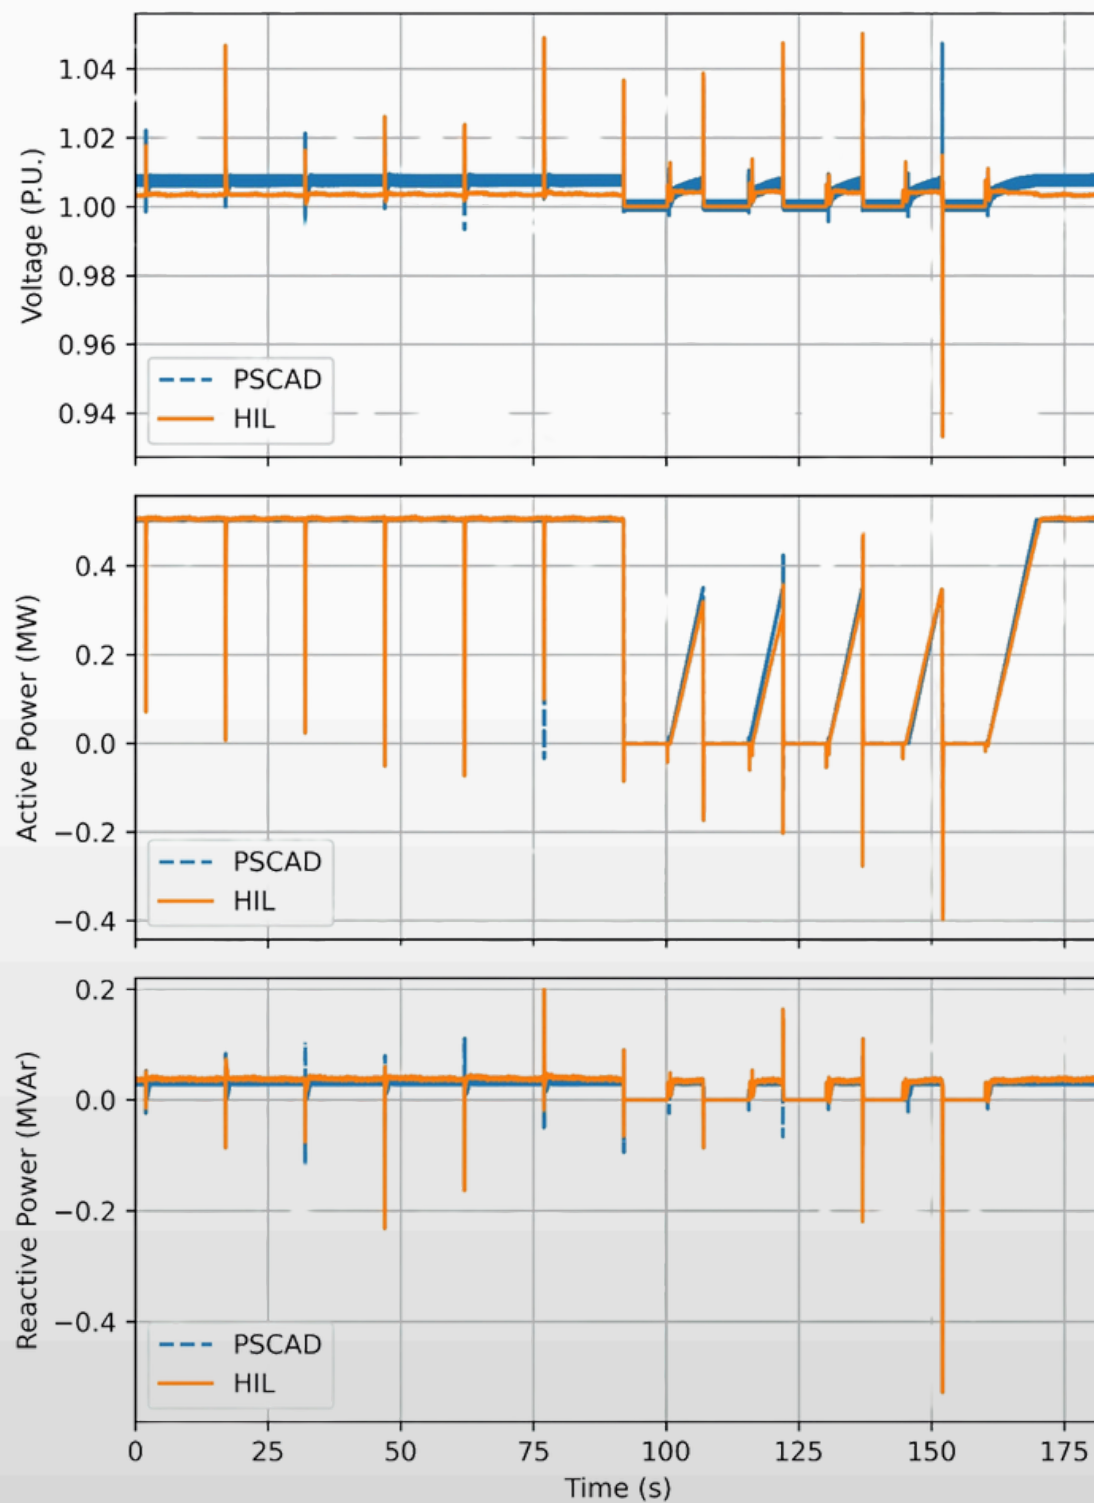

RSCAD Model:

**Real Hardware
Controller**

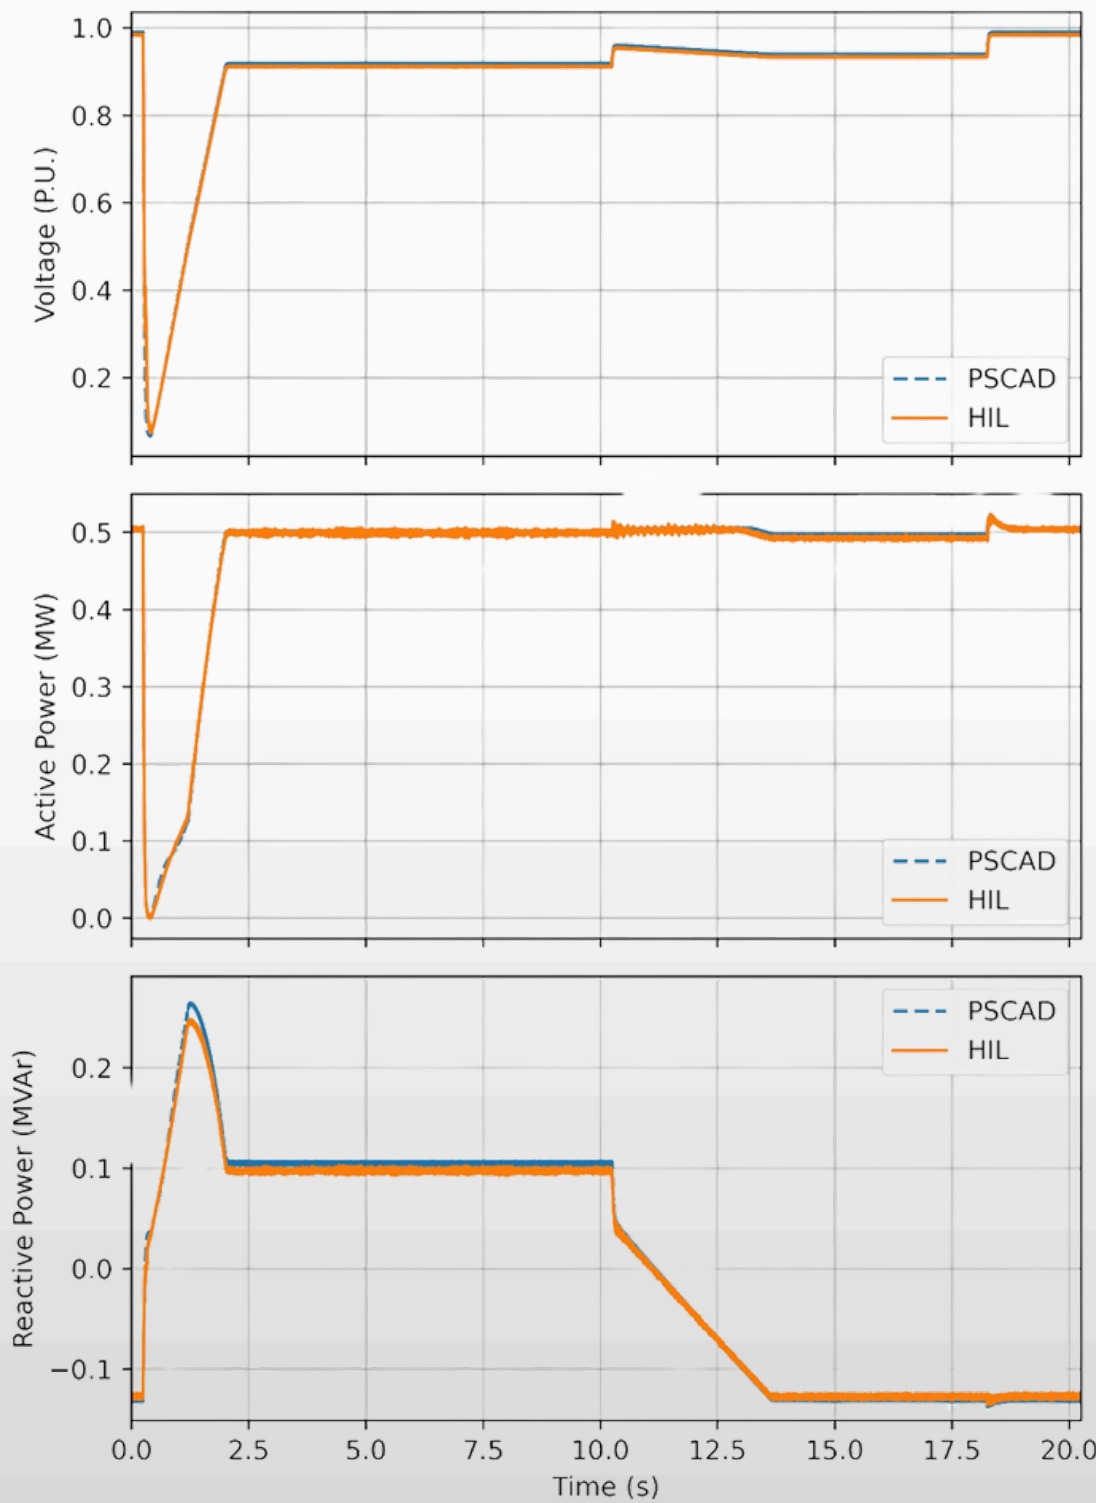

PSCAD Model validation against HIL Data

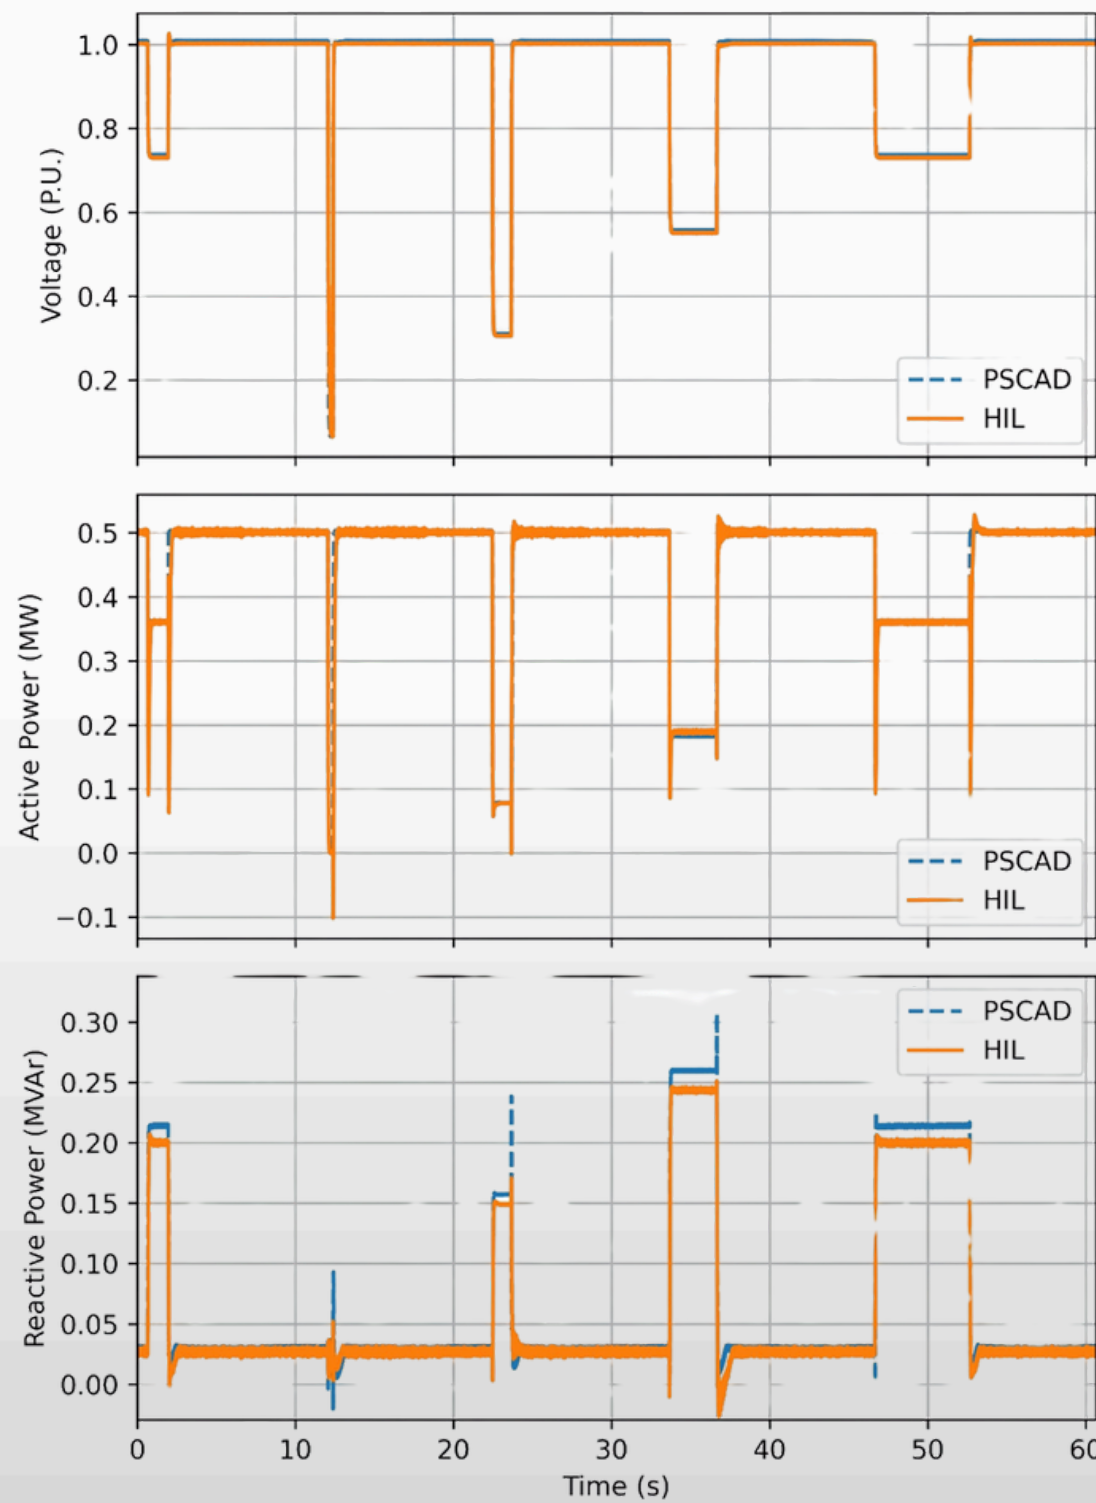

Voltage Phase Angle Jump

LVRT

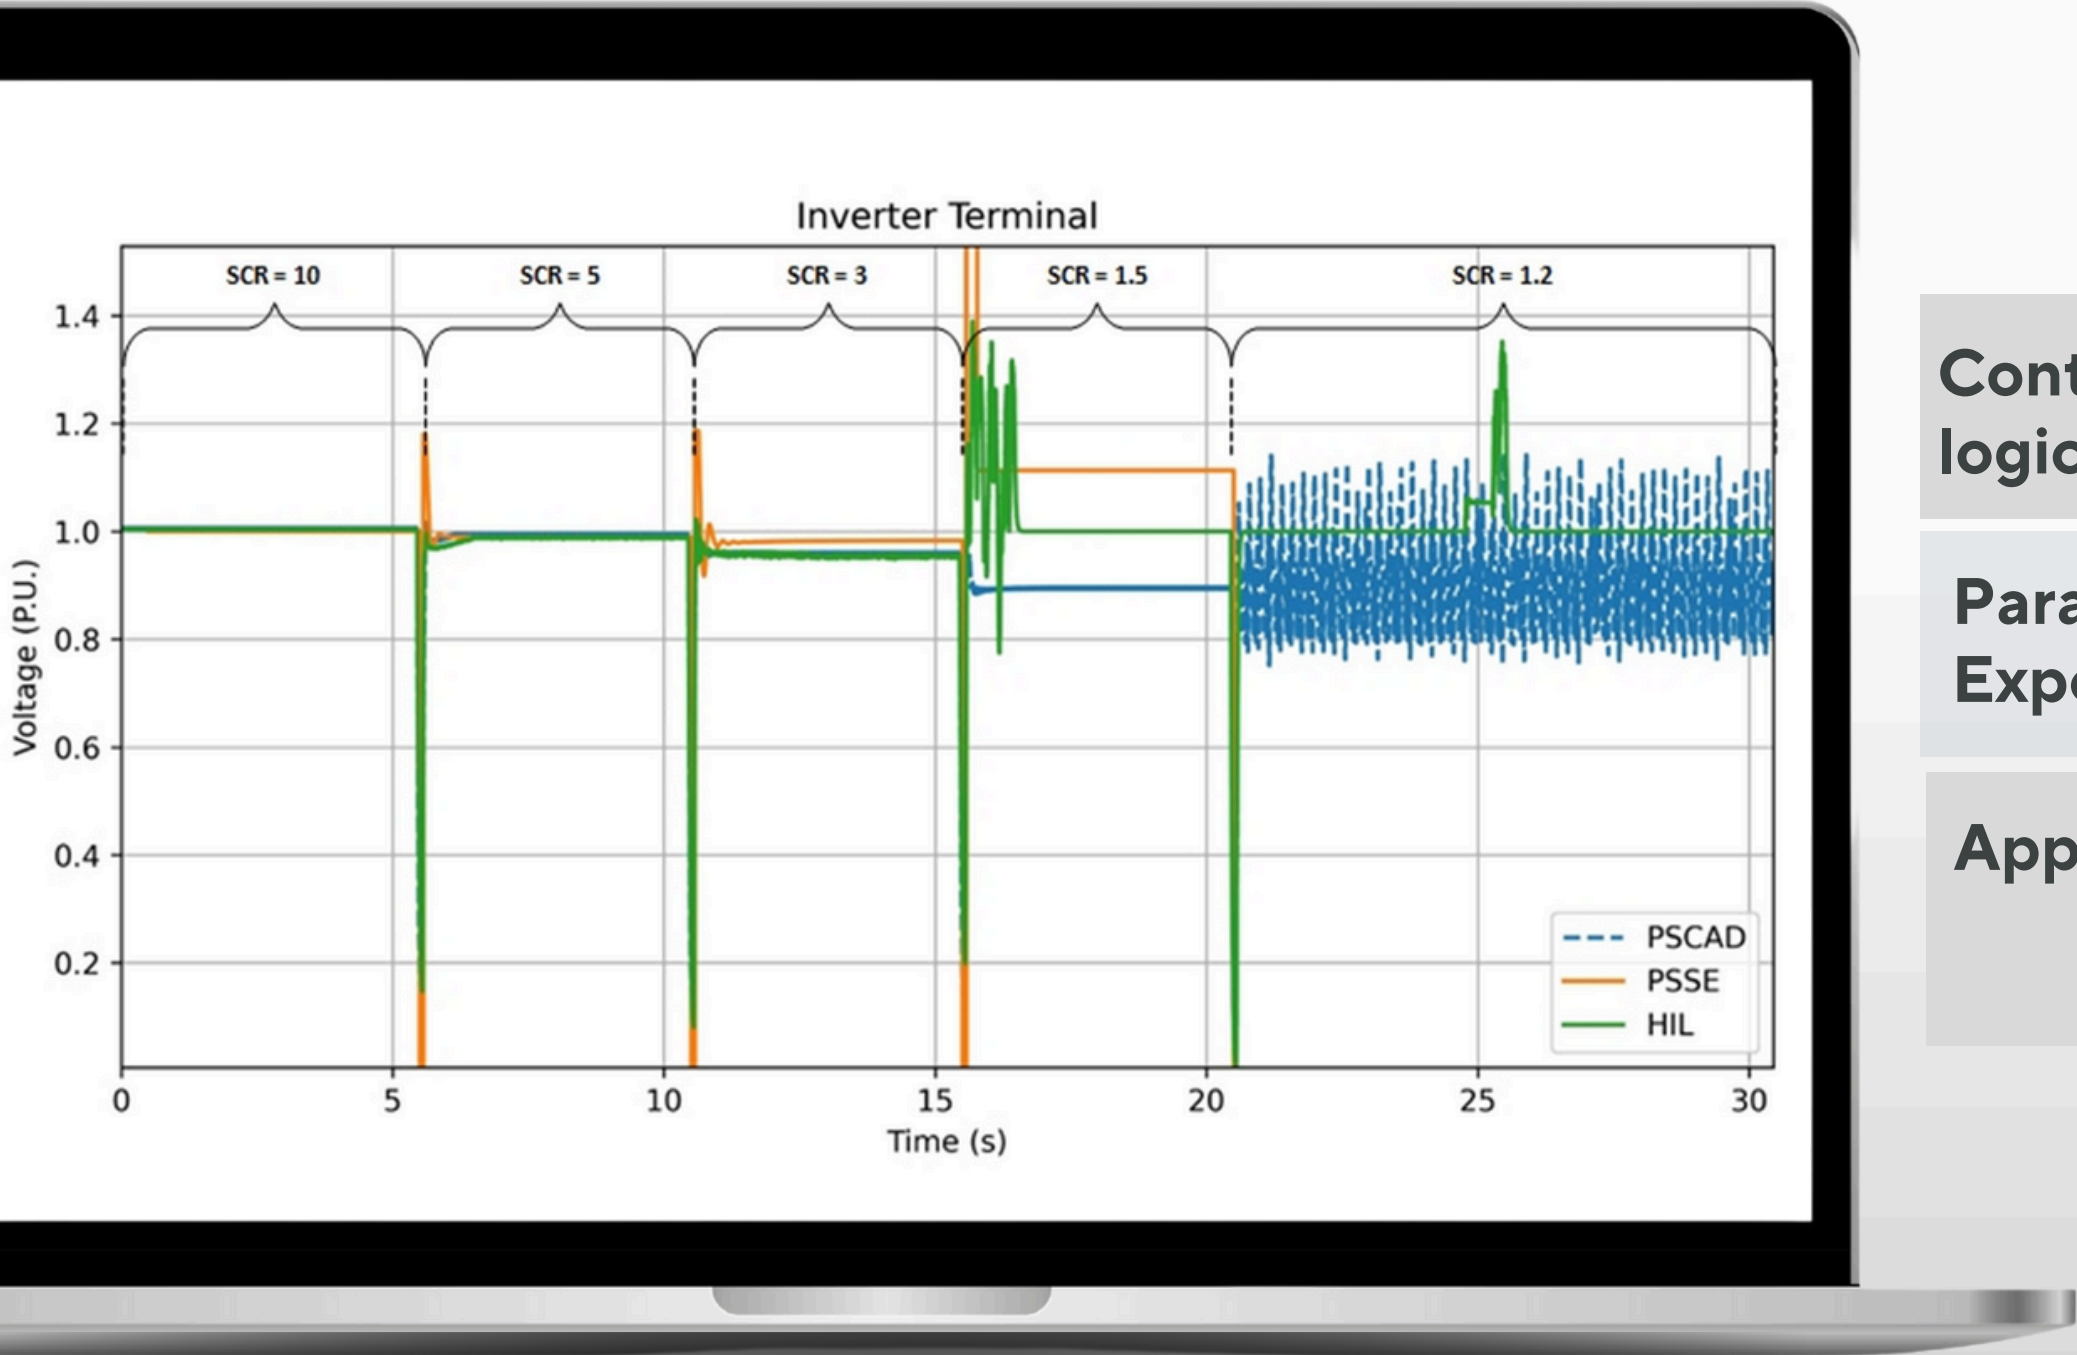

Multi LVRT

Significant difference between RMS/PSCAD/HIL

Short circuit ratio TEST

**Control
logic**

RMS (Phasor)

Simplified

**Parameter
Exposure**

Limited

Application

**Stability,
Load Flow**

**EMT (Time-
Domain)**

Detailed

**More
exposed**

**Protection,
Transients**

HIL (Real-Time)

**Real controller
in loop**

**Fully exposed
(RT OS level)**

**Controller
validation,
protection**

Key Takeaways

- IBR's performance is critical for integrating renewable energy sources into the grid
- CHIL (Controller-Hardware-in-the-Loop) testing helps:
 - Improve inverter performance
 - Ensure grid compliance
 - Reduce development time and cost
- CHIL enables real-time, high-fidelity testing of control systems under realistic grid conditions can play vital role in grid transition

Recommendation

- Utilities should enforce strict adherence to standardized procedures for Hardware-in-the-Loop (HIL) validation reports, particularly in relation to PSCAD and PSS[®]E model submissions.
- Utilities should publish clear guidelines outlining accepted HIL procedures and test cases.
- Developer should prioritize implementing CHIL testing as part of the equipment selection process to ensure reliability and compliance.

Enabling Our HIL testing Journey.....

Recognizing the urgency of our situation:

- The **RTDS Group** promptly shipped essential equipment, enabling us to begin in-house Hardware-in-the-Loop (HIL) testing without delay.
- Special thanks to **Kati Sidwall** (RTDS Group) for her on-site visit and hands-on training, which was instrumental in getting our team up to speed with HIL methodologies.
- Appreciation to **Sumek Elimban** for providing on-demand technical support throughout the setup, troubleshooting, and validation phases.

THANK YOU
